INSTRUCTIONS TO THE AUTHORS

SCOPE

The Integrated Journal of Medical Sciences (IJMS) is a biomedical journal. It publishes original communications of biomedical research that advances or illuminates medical science or that educates the journal readers. It is issued quarterly per year.

Manuscripts dealing with clinical aspects will be considered for publication, provided they contain results of original investigations. Articles need to be of general interest – e.g., they cross the boundaries of specialities or are of sufficient novelty and importance that the journal's readers, whatever their speciality, should be made aware of the findings. Papers of routine nature which are merely records of interesting cases as also those dealing with modifications of routine methodology will not be encouraged. Further, serialization of articles by the same author(s) into various parts is strongly discouraged. In such cases the authors are advised to submit independent papers with self-sufficient titles and text.

The IJMS strongly discourages duplication/ reduplication of data already published in other journals (even when certain cosmetic changes/ additions are made). If and when duplication is detected after publishing in IJMS, the journal will be forced to 'retract' such articles. Articles based on work carried out in private nursing homes and other non-recognized hospitals/research institutes will be discouraged.

All papers submitted to IJMS are subject to peer review process. All accepted papers will be suitably edited before publication.

SUBMISSION OF MANUSCRIPT

All manuscripts submitted for publication to the IJMS should include the following:

COVERING LETTER

A covering letter which could explain why the paper should be published in the IJMS, rather than a specialty journal. One of the authors could be identified as the corresponding author of the paper, who would be responsible for the contents of the paper as also answer.

MANUSCRIPT

Manuscripts must be submitted through email at drlalitmeena@gmail.com. First time users will have to

register at this site. Registration is free but mandatory. Registered authors can keep track of their articles after logging into the site using their user name and password. Authors do not need to pay for submission, processing or publication of articles. Manuscripts can also be submitted by e-mail at drlalitmeena@gmail.com.

Manuscripts should be presented in as concise form as possible, typewritten neatly. Pages should be numbered consecutively and the contents arranged in the following order:

Title

Title of the article should be short, continuous (broken or hyphenated titles are not acceptable) and yet sufficiently descriptive and informative so as to be useful in indexing and information retrieval.

Title page should include name(s) of author(s) with departmental affiliations, complete postal addresses with e-mails.

Abstract

All manuscripts should (except reviews) have a structured abstract (of about 250 words) with subheadings of Background & objectives, Methods, Results, and Interpretation & conclusions. Abstract should be brief and indicate the scope and significant results of the paper. It should only highlight the principal findings and conclusions so that it can be used by abstracting services without modification. Conclusions and recommendations not found in the text of the articles should not be inserted in the Abstract.

A set of suitable key words (6-8 in number) arranged alphabetically may be provided.

Introduction

Introduction should be brief and state precisely the scope of the paper. Review of the literature should be restricted to reasons for undertaking the present study and provide only the most essential background.

Material & Methods

The nomenclature, the source of material and equipment used, with the manufacturers details in parenthesis, should be clearly mentioned. The procedures adopted should be explicitly stated to enable other workers to reproduce the

results, if necessary. New methods may be described in sufficient detail indicating their limitations. Established methods can be just mentioned with authentic references and significant deviations, if any given, with reasons for adopting them. While reporting experiments on human subjects and animals, it should be clearly mentioned that procedures followed are in accordance with the ethical standards laid down by the national bodies or organizations of the particular country. Adequate information should be provided on the care and use of laboratory animals, source of animals, strain, age, sex, housing and nutrition, etc. Whenever needed, appropriate certification should be provided at the time of submission of the manuscripts. The drugs and chemicals used should be precisely identified, including generic name(s), dosage(s) and route(s) of administration.

Study design: Selection of the observational or experimental participants (patients or laboratory animals, including controls, whether randomly or consecutively) and basis of sample size calculation should be mentioned clearly, including eligibility and exclusion criteria and a description of the source population.

Period (with month and year) and **place of the study** should be clearly stated.

Studies based on clinical trials: All clinical trials should be registered in a Primary Clinical Trial Registry and the Registration number be given under Material & Methods. Articles presenting with results of randomized clinical trials should provide information on all major study elements, including the protocol, assignment of interventions (methods of randomization, concealment of allocation to treatment groups), and the method of masking (blinding), based on the CONSORT Statement (<http://www.consort-statement.org/>). It should be clearly stated that study protocol was approved by the institutional/local ethics committee and written consent obtained from the participants.

The statistical analysis done and statistical significance of the findings when appropriate, should be mentioned. Unless absolutely necessary for a clear understanding of the article, detailed description of statistical treatment may be avoided. Articles based heavily on statistical considerations, however, need to give details particularly when new or uncommon methods are employed. Standard and routine statistical methods employed need to give only authentic references.

Results

Only such data as are essential for understanding the discussion and main conclusions emerging from the study should be included. The data should be arranged in unified

and coherent sequence so that the report develops clearly and logically. Data presented in Tables and Figures should not be repeated in the text. Only important observations need to be emphasized or summarized. The same data should not be presented both in tabular and graphic forms. Interpretation of the data should be taken up only under the Discussion and not under Results.

Discussion

The discussion should deal with the interpretation of results without repeating information already presented under Results. It should relate new findings to the known ones and include logical deductions. It should also mention any weaknesses/ limitations/ lacunae of the study.

The conclusions can be linked with the goals of the study but unqualified statements and conclusions not completely supported by the data should be avoided. Claiming of priority on work that is ongoing should also be avoided. All hypotheses should, if warranted, clearly be identified as such; recommendations may be included as part of the Discussion, only when considered absolutely necessary and relevant.

Acknowledgment

Acknowledgment should be brief and made for specific scientific/technical assistance and financial support only and not for providing routine departmental facilities and encouragement or for help in the preparation of the manuscripts (including typing or secretarial assistance).

References

The total number of References should normally be restricted to a maximum of 30.

Reference example: Rose ME, Huerbin MB, Melick J, Marion DW, Palmer AM, Schiding JK, et al. Regulation of interstitial excitatory amino acid concentrations after cortical contusion injury. *Brain Res.* 2002;935(1-2):40-6.

Tables

Tables should be typed separately and numbered consecutively with Roman numerals (I, II, III, etc). They should bear brief title and column headings should also be short. Units of measurement should be abbreviated and placed below the headings. Statistical measurement variations such as SD and SE should be identified. Inclusion of structural formulæ in Tables should be avoided. Also, Tables should not be submitted as photographs. Abbreviations used be given in the footnote.

Illustrations

Illustrations should be submitted in JPEG or TIFF format (size not more than 1 MB), numbered consecutively in Arabic numerals with appropriate Title and explanation of symbols in the legends for illustrations.

Photomicrographs should have internal scale markers regarding details of magnification to facilitate reduction in size in final print. Symbols, arrows and letters used in the photomicrographs should contrast with the background.

All published material should be acknowledged and copyright material should be submitted along with the written permission of the copyright holder.

Abbreviations

Only standard abbreviations are to be used. The abbreviations should conform to the International System of Units (SI), throughout the text, Tables and Figures. Generic names of the drugs should be used. If proprietary brands are used in research brand name, name of manufacturer and country should be given in parentheses after the generic name at the first place of use.

AUTHORS' CONTRIBUTIONS

All authors are encouraged to specify their individual contributions at the bottom of the title page or on a separate page. The IJMS will not publish an item unless it has the signatures of all the authors. Participation solely in the acquisition of funding or the collection of data does not justify authorship. General supervision of the research group is also not sufficient for authorship. Any part of an article critical to its main conclusions must be the responsibility of at least one author.

CONFLICTS OF INTEREST

A conflict of interest exists if authors or their institutions have financial or personal relationships with other people or organizations that could inappropriately influence (bias) their actions. A conflict can be actual or potential, and full disclosure to the Editor is absolute requirement. All submissions must include disclosure of all relationships that could be viewed as presenting a potential conflict of interest. All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. If there are no conflicts of interest, authors should state so.

UNDERTAKING BY AUTHOR(S)

It is necessary that all the authors give an undertaking (in the format specified by the journal) indicating their consent to be co-authors in the sequence indicated on the title page. Each author should give his or her names as well as the address and appointment current at the time the work was done, plus a current address for correspondence including telephone and fax numbers and email address. A senior author may sign the Undertaking by Authors for a junior author who has left the institution and whose whereabouts are not known and take the responsibility.

A paper with corporate (collective) authorship must specify the key persons responsible for the article; others contributing to the work should be recognized separately.

COPYRIGHT TRANSFER AGREEMENT

Author(s) will be asked to sign a transfer of copyright agreement, which recognizes the common interest that both journal and author(s) have in the protection of copyright. It will also allow us to tackle copyright infringements ourselves without having to go back to authors each time.
