Introduction

Globally climate is changing due to anthropogenic activities and continuous emission of greenhouse gases (GHG) and in turn leading to global warming and this situation will continue to deteriorate in the coming decades and centuries ahead. The most affected sector due to global warming is agricultural sector. Other alarming factors associated with agriculture include increased water, air and soil pollution. All these factors key challenges to provide food and nutritional security. The climate change is expected to impact the global Food and Nutritional Security and in turn human health, livelihood assets, food production and distribution channels, as well as changing purchasing power and market flows. There is a need to take several significant steps and have a complete discussion on creating awareness by arranging 2 days webinar in collaborative mode (BHU, NABARD and IRRI-SARC) on “Climate Resilient Agriculture for Food and Nutritional Security”.
